

Description	Power Range
-------------	-------------

The DZPANTU-020B080 digital servo drive is designed to drive brushed and brushless servomotors from a compact form factor ideal for embedded applications. This fully digital drive operates in torque, velocity, or position mode and employs Space Vector Modulation (SVM), which results in higher bus voltage utilization and reduced heat dissipation compared to traditional PWM. The drive can be configured for a variety of external command signals. Commands can also be configured using the drive's built-in Motion Engine, an internal motion controller used with distributed motion applications. In addition to motor control, this drive features dedicated and programmable digital and analog inputs and outputs to enhance interfacing with external controllers and devices.

DZPANTU-020B080 drives feature an Ethernet interface for network communication using Ethernet POWERLINK, Modbus TCP or Ethernet, and USB connectivity for drive commissioning using DriveWare® 7, available for download at [www.a-m-c.com](http://www.a-m-c.com).

All drive and motor parameters are stored in non-volatile memory. The DZPANTU Series Hardware Installation Manual is available for download at [www.a-m-c.com](http://www.a-m-c.com).

Peak Current	20 A (14.1 A <sub>RMS</sub> )
Continuous Current	10 A (10 A <sub>RMS</sub> )
Supply Voltage	18 - 80 VDC

**Information on Approvals and Compliances**

	<p>US and Canadian safety compliance with UL 508c, the industrial standard for power conversion electronics. UL registered under file number E140173. Note that machine components compliant with UL are considered UL registered as opposed to UL listed as would be the case for commercial products.</p>
	<p>Compliant with European EMC Directive 2004/108/EC on Electromagnetic Compatibility (specifically EN 61000-6-4:2007 for Emissions, Class A and EN 61000-6-2:2005 for Immunity, Performance Criteria A). LVD requirements of Directive 2006/95/EC (specifically, EN 60204-1:2004, a Low Voltage Directive to protect users from electrical shock).</p>
	<p>RoHS (Reduction of Hazardous Substances) is intended to prevent hazardous substances such as lead from being manufactured in electrical and electronic equipment.</p>
	<p>Functional Safety STO is TÜV Rheinland® certified and meets requirements of the following standards:</p> <ul style="list-style-type: none"> <li>• EN ISO 13849-1 Category 4 / PL e</li> <li>• EN IEC 61800-5-2 STO (SIL 3)</li> <li>• EN62061 SIL CL3</li> <li>• IEC 61508 SIL 3</li> </ul>

**Notes**

1. Capable of supplying drive rated peak current for 2 seconds with 10 second foldback to continuous value. Longer times are possible with lower current limits.
2. Continuous  $A_{rms}$  value attainable when RMS Charge-Based Limiting is used.
3. Lower inductance is acceptable for bus voltages well below maximum. Use external inductance to meet requirements.
4. Contact *ADVANCED* Motion Controls for 1Vp-p Sine/Cosine Encoder feedback availability.
5. Additional cooling and/or heatsink may be required to achieve rated performance.

### Pin Details

#### ADDR0 (P1-6); ADDR1 (P1-4)

ADDR0, as well as ADDR1, are used to set the last octet of the IP Address of the drive within the Ethernet network. The value is set by applying a fixed voltage to the ADDR0 and ADDR1 pins. ADDR0 sets the lower 4 bits of the address, and ADDR1 sets the upper 4 bits of the address. The values for ADDR0 and ADDR1 are always integer multiples of 1/5 V within the range 0-3 V. Examples of the voltages required to set certain node ID's are given in the table below. Note that for POWERLINK, the IP address will always be 192.168.100.xxx.

ADDR1 Voltage (Volts)	ADDR1 Value (Hex)	ADDR0 Voltage (Volts)	ADDR0 Value (Hex)	Node ID (Decimal)
0	0	0	0	<b>Address stored in NVM</b>
0	0	0.2	1	<b>001</b>
0	0	0.4	2	<b>002</b>
...	...	...	...	...
3	F	2.6	D	<b>253</b>
3	F	2.8	E	<b>254</b>
3	F	3	F	<b>255</b>

#### AMP STATUS LED+ (P1-46); AMP STATUS LED- (P1-44)

AMP STATUS LED+/- provide power bridge status outputs that can be used with either a single Bi-Directional LED or two Uni-Directional LEDs, depending on the user configuration (reference the DZPANTU Hardware Installation Manual for the recommended wiring diagram, available for download at [www.a-m-c.com](http://www.a-m-c.com)). Status LED output functionality is as follows:

AMP STATUS LED+/- Functionality	
Drive State	Pin Output State
Power Bridge Enabled	AMP STATUS LED- = High; AMP STATUS LED+ = LOW
Power Bridge Disabled (Fault)	AMP STATUS LED + = HIGH; AMP STATUS LED- = LOW
No Power Applied to Drive	AMP STATUS LED +/- = LOW

#### LINK/ACT IN (P1-96); LINK/ACT OUT (P1-94); STATUS/ERR+/- (P1-93/95)

The LINK/ACT IN, LINK/ACT OUT, and STATUS/ERR pins serve as Ethernet network indicators. On a standard RJ-45 connector used with Ethernet network topology, the typical Ethernet network indicator LED locations is shown in the below diagram. **Note**

that DZPANTU drives feature signals for connection to LEDs on an RJ-45 connector, but the connector itself is not included on the drive. The MC1XDZPE01 Mounting Card features a built-in RJ-45 connector with LEDs for this purpose.

LINK/ACT IN and LINK/ACT OUT are used to drive the corresponding LINK IN and LINK OUT LEDs on a typical RJ-45 connector. (reference the DZPANTU Hardware Installation Manual for the recommended wiring diagram, available for download at [www.a-m-c.com](http://www.a-m-c.com)). The LED Function Protocol tables below describe typical LED functionality.

**Communication LEDs Function Protocol**

LINK/ACT LEDES	
LED State	Description
Green – On	Valid Link - No Activity
Green – Flickering	Valid Link - Network Activity
Off	Invalid Link

*Safe Torque Off (STO) Inputs (P2-SAFE1 to P2-SAFE8)*

The Safe Torque Off (STO) Inputs are dedicated +5VDC sinking single-ended inputs.

**MOUNTING DIMENSIONS**

**PART NUMBERING INFORMATION**

DigiFlex® Performance™ series of products are available in many configurations. Note that not all possible part number combinations are offered as standard drives. All models listed in the selection tables of the website are readily available, standard product offerings.

ADVANCED Motion Controls also has the capability to promptly develop and deliver specified products for OEMs with volume requests. Our Applications and Engineering Departments will work closely with your design team through all stages of development in order to provide the best servo drive solution for your system. Equipped with on-site manufacturing for quick-turn customs capabilities, ADVANCED Motion Controls utilizes our years of engineering and manufacturing expertise to decrease your costs and time-to-market while increasing system quality and reliability.

**Examples of Customized Products**

- ▲ Optimized Footprint
- ▲ Private Label Software
- ▲ OEM Specified Connectors
- ▲ No Outer Case
- ▲ Increased Current Resolution
- ▲ Increased Temperature Range
- ▲ Custom Control Interface
- ▲ Integrated System I/O
- ▲ Tailored Project File
- ▲ Silkscreen Branding
- ▲ Optimized Base Plate
- ▲ Increased Current Limits
- ▲ Increased Voltage Range
- ▲ Conformal Coating
- ▲ Multi-Axis Configurations
- ▲ Reduced Profile Size and Weight

Feel free to contact Applications Engineering for further information and details.

**Available Accessories**

ADVANCED Motion Controls offers a variety of accessories designed to facilitate drive integration into a servo system. Visit [www.a-m-c.com](http://www.a-m-c.com) to see which accessories will assist with your application design and implementation.
